

'Garnet' LED Light Boards Multiple indoor uses.

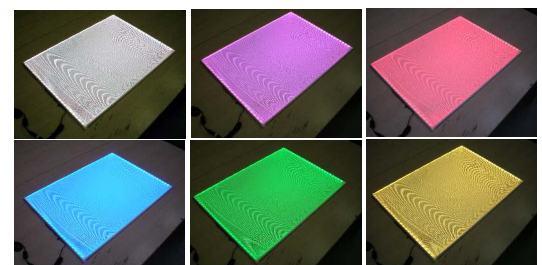

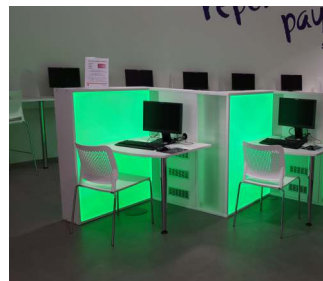

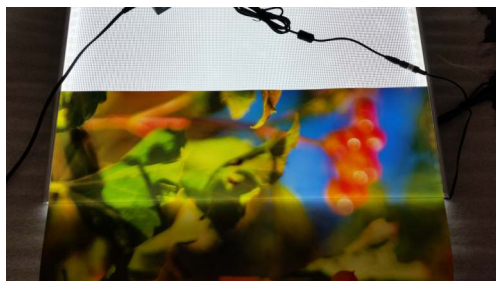

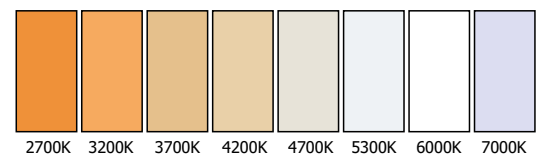

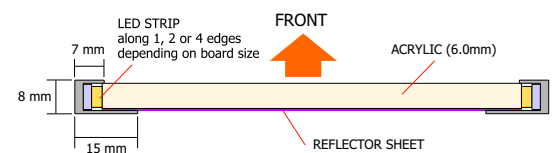

8mm Deep, Edge Lit light boards any size up to 3000 x 1500mm

Heat Sink Option 'Type A' (15mm to front - 7mm to reverse)

Heat Sink Option 'Type B' (7mm to front - 15mm to reverse)

The 'Garnet' LED light guide boards are only 8mm deep, with a row of LED's running along one or more of its edges depending on board size. Brilliant illumination is generated by the high brightness LEDs which edge light an optically clear, CNC engraved acrylic. Every board is individually engraved with its own unique grid. This produces a totally even and shadow free illumination across the face - whatever its size. The grid is normally diffused by any substrate being illuminated but in certain applications such as lighting, a diffusing sheet can be used.

Boards can be stand alone or built-in to use as a backlight source in very narrow spaces. The 12v or 24v light boards can be manufactured at any size up to 3000 x 1500mm, are long life and maintenance free.

Applications

Illuminated Signage
Photographic and print display
Fit into units to create attractive areas
Display tables and cabinets
Luxury product displays
Interior display lighting
Illuminate a wide range of materials
(Onyx, Stone, Stained glass,
artwork and many more)
