The Aqua Pond Cleaning Process

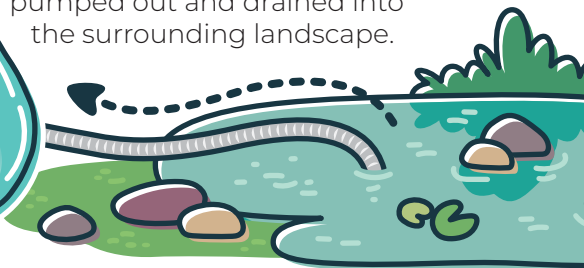

Why pond maintenance is essential

Whether you have a corporate pond, school pond, garden pond or any size, all of them require maintenance every 2-3 years based on their size. Due to the different types of weather Britain has, dirt, debris, algae, and a foul smelling toxic odour can accumulate quickly. This can easily strain your filter, harm your ornamental features and decrease the lifespan of any marine life you have in your pond.

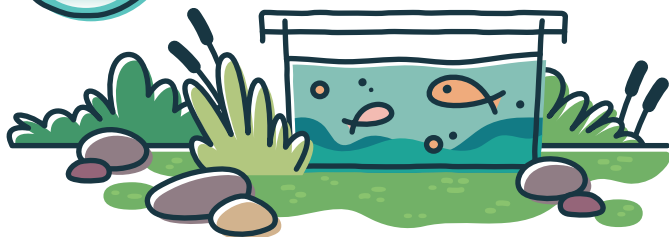

Soon enough, your aquatic oasis can turn into a hazardous environment for your fish, depriving them of light and oxygen. Don't let these issues disbalance your pond's ecosystem. With our comprehensive pond cleaning services, premium grade pond cleaning equipment and extensive experience, we ensure your pond's longevity will flourish with Anthony and his team.

The existing pond-water is pumped out and drained into the surrounding landscape.

If you keep fish some of this water will be used to fill a holding tank (in the summer we also use an air pump to keep the water oxygenated).

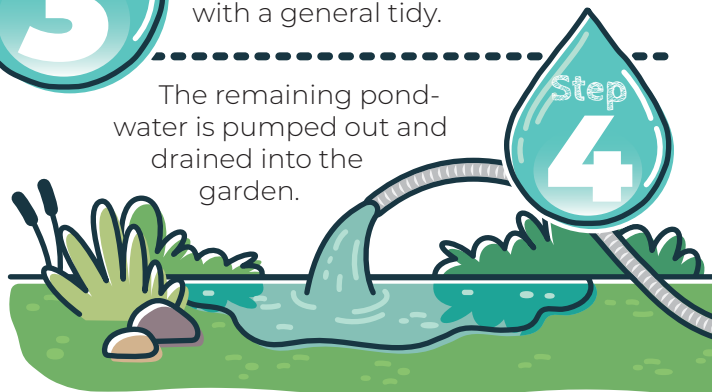

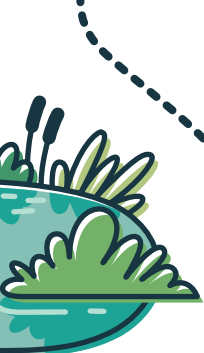

Rest assured, your fish and wildlife will be kept safe in the holding tank throughout the entire cleaning process, showing our responsible and caring approach to pond maintenance.

The aquatic plants are carefully removed from the pond and will be trimmed back to the original pots with a general tidy.

The remaining pond-water is pumped out and drained into the garden.

The black sludge at the bottom of the pond is pumped out or removed by hand and placed in the garden.

Pond sludge is made up of the organic materials that are found in and around your pond.

These range from fish food, faeces and plant debris, and is the end product of all of this matter falling to the bottom of your pond and beginning to rot.

Pond sludge is an excellent organic fertiliser rich in nutrients!

Please note that we are unable to take any garden waste away!

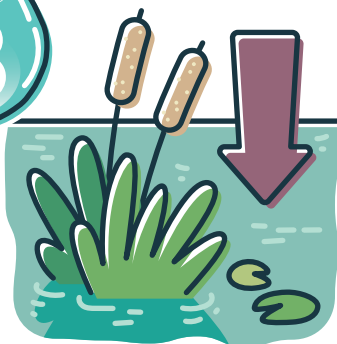

Once all the sludge is removed we clean the pond liner with a hose, vacuum any debris and use a brush to remove any remaining grime. We only do soft cleaning (a power washer can damage the pond liner).

The pond is refilled and a dechlorinator is added. This makes the water more habitable for your fish, and ensures they will have an easier time transitioning to their clean home.

Aquatic plants, fish, and other wildlife are returned to the pond.

We deep clean the filter, pump and UV clarifier to ensure optimum performance, increasing the longevity of our professional clean.

Aquascape Automatic Dosing System for Ponds and Fountains

Maintaining optimum water quality has never been easier. The Aquascape Automatic Dosing System for ponds and fountains automatically adds a choice of specially formulated Aquascape water treatments to ponds, decorative fountains, and Pondless® Waterfalls, eliminating the guesswork and routine of manually adding water treatments.

The Automatic Dosing System is dependable, extremely quiet, and provides treatment options for various issues in water features. Water treatments should be added consistently and regularly to maintain optimum water quality.

Multiple treatment options are available for various issues, including cloudy water, foul odours, and excessive debris.

Program the system based on water feature size with an easy-to-use control panel. **The included X2 option doubles the dosage for new water features.**

Optional Extras

Filter maintenance:

We can install or upgrade your filter system, or simply repair an existing filter.

Pond aeration system:

This helps to oxygenate your water. Not only will your water stay clearer for longer, but it will make conditions more habitable for fish and other aquatic life. The water circulation generated by the aerator forms a hole in frozen ice, allowing for gas exchange and keeping the water open throughout winter.

LED lighting: Create an elegant and stylish atmosphere with LED pond lights. Your pond will look like an enchanted nighttime oasis, with an array of beautiful colours that can be adjusted to suit your mood.

We also provide other services such as replacing UV bulbs and repotting plants for an additional fee.
